

FLAP VALVES

The Aquafix flap valves are used in surface water, sewer and process water to avoid backflow in pipeline system. These valves are manufactured in our own factory from durable 1st class quality HDPE. The valves are fitted with a stainless steel shaft and ballastweight. The non-return valves are sealed on one side by the use of EPDM rubber to guarantee watertightness. The valves have been tested and found suitable to a maximum working pressure of 5 McW. The valves are available for wall mounting (model W), with a spigot (model S) or with a flange connection (model F). It is important that the valve is always positioned/mounted at an angle of 10 degrees in order to achieve the proper sealing, except model W. On request customized production is possible. This type of valve is only suitable for the sealing of horizontal pipelines.

Features and benefits:

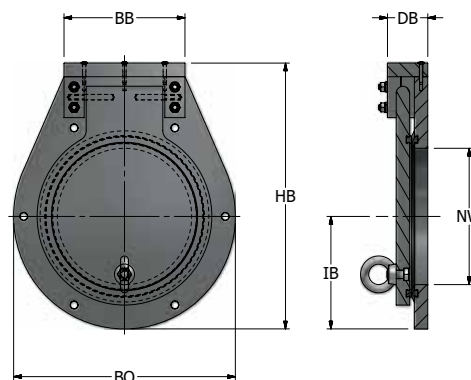

- Manufactured out durable HDPE and Stainless steel
- Easy fitting
- Customized production on request
- Maintenance free

Options:

- Available as W-model (wallmounting) S-model (spigot) or as F-model (flange connection)
- Stainless steel ballastweight on request adjustable

Certificate:

- Aquafix Quality Certificate
