

## REFIX RAINWATER TANK FILTER

The Refix tank filters are developed especially for rainwater and are designed for the collection and pre-tank filtering of rainwater. The Refix filters have a large effective filtration surface area. The Rainwater flows over the entire filtration surface area to ensure a high capacity and a high efficiency. The wedge wire filter element with an aperture of 0.7mm is made of solid stainless steel and is placed tilted. This is to allow the water to flow through the filter. This ensures a long life span and a very high efficiency. The Refix filters can be used for filtering rainwater from large and industrial buildings. The Refix filter housing is manufactured out of high quality durable HDPE in our own factory. The Refix filters need low maintenance. All the Refix filters can be equipped with automatic filter nozzles in order to minimize the required maintenance and to sustain the high efficiency. The filters are available with a spigot (Sp) or with a sealing (Se). On request customized production is possible.

### Features and benefits:

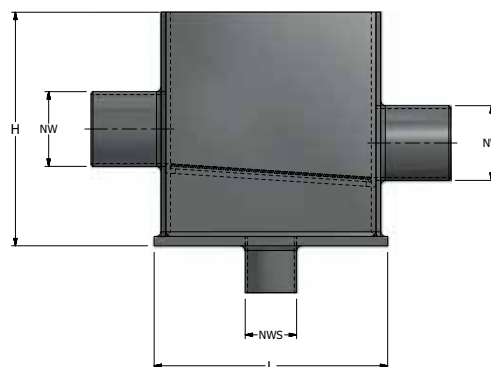

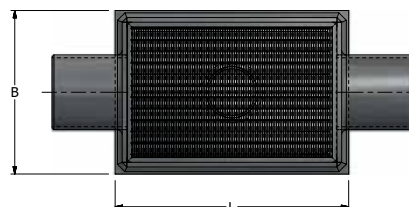

- Manufactured out of durable HDPE and stainless steel
- Easy fitting
- Low maintenance
- Customized production on request

### Options:

- Underground model with manhole and cover
- Equipped with filter nozzles
- Motorized valve and timer
- Custom-made

### Certificats:

- Aquafix Quality Certificate
